

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

considerable, several correspondents of the Conservator having contributed.

The work in the museum during the year has been limited to the proper placing of the new material received,—no small task in view of the crowded condition of our cases. A few small groups have been rearranged, and the terrestrial operculates and American Helices have been placed in shallow trays in drawers.

The great number of species and types contained in the collection of the Academy imposes a large amount of correspondence upon the Conservator, and no little time is consumed in the comparison of specimens for correspondents. This labor is amply repaid, however, by the large mass of new material which it secures us, and which could be obtained by no other means.

Respectfully submitted,

H. A. PILSBRY,
Conservator.

REPORT OF THE ENTOMOLOGICAL SECTION.

During the year about to close ten meetings of the Section have been held and they were well attended, considering the number of its members and associates. One member has died and two members and three associates have been elected. Many specimens have been added to the collection in the way of donations from members and others and through "The Entomological News" in exchange for names. The collections are in fairly good condition considering the unsafe cases they are kept in at present and the insufficient amount of room at our disposal. Three hundred and fifty entries of additions to the library have been made in the donation book to date. A large part of these publications cannot be arranged in the library and are laid away in piles. This is on account of the meagre amount of library space, the library some time ago having outgrown its present quarters. "The Entomological News," a journal published by the Section and the American Entomological Society devoted to insect life, has appeared regularly and has been eminently successful. Volume four has been completed, with three hundred and forty-four pages and fifteen full page plates and numerous cuts. The journal will be continued, the number for January, 1894, being in the hands of the printer.

At the last meeting the following gentlemen were elected to serve as officers for the coming year :—

<i>Director,</i>	George H. Horn, M. D.
<i>Vice-Director,</i>	Charles S. Welles.
<i>Treasurer,</i>	Ezra T. Cresson.
<i>Conservator,</i>	Henry Skinner, M. D.
<i>Recorder,</i>	Henry Skinner, M. D.
<i>Publication Committee,</i>	.	.	.	{	James H. Ridings.
				}	Charles W. Johnson.

REPORT OF THE BOTANICAL SECTION.

The Vice-Director of the Botanical Section respectfully reports that the general prosperity noted in other years still continues, though the work of the Conservator is seriously hampered by reason of the crowded condition of the Herbarium shelves.

Meetings have been regularly held except during the Summer recess. Discussions on matters of botanical interest have been frequent, and two original papers of value to general science on the botany of the Peary Expeditions and researches relative to the jelly glands of *Brasenia peltata*, have been accepted for publication in the Proceedings of the Academy.

Donations to the Herbarium have been liberal: reaching the number of 2,599 species; 2,344 were of flowering plants and ferns, of which 596 were new to our collection.

The Section is free from debt. The officers elected for the ensuing year are:

<i>Director,</i>	W. S. W. Ruschenberger, M. D.
<i>Vice-Director,</i>	Thomas Meehan.
<i>Conservator,</i>	John H. Redfield.
<i>Recorder,</i>	Charles Schaffer, M. D.
<i>Recording Sec'y and Treasurer,</i>					Stewardson Brown.

Respectfully submitted,

THOMAS MEEHAN,
Vice-Director.

REPORT OF THE MINERALOGICAL AND GEOLOGICAL SECTION.

Meetings of the Section have been held at the Academy regularly during the year, except in the summer and in September and October, when most of the members are absent.
